## Case Summary of Data

Confirming COVID-19 cases, which indicate individuals who have been tested and confirmed to be infected with the virus. While organizations focus on confirmed cases for their reliability, not everyone is tested, leading to lower reported figures than the actual number of infections. Limited testing in many countries results in a significant gap between confirmed cases and true infections.

## Death Summary

Number of confirmed deaths from COVID-19. Research has shown that these figures are an underestimate of the total pandemic death toll. This is because of limited testing, poorly functioning death registries, challenges in determining the cause of death, and disruptions during the pandemic.

## Death Summary

Vaccination has saved millions of lives during the COVID-19 pandemic. Within a year of the start of the pandemic, several vaccines were developed against the virus. In this The following charts show the total number of people who have received at least one dose of the COVID-19 vaccine. This may not be equivalent to the number with a complete initial protocol if the vaccine requires two doses.
